

Know what your Fabric tenant is doing. Pay only for the capacity you need.

A read-only review of your Microsoft Fabric and Power BI tenant. We show you what's running, what it costs and what to fix first.

Questions it answers

Are we paying for more capacity than we need?

Which workspaces and items are still in use?

How do changes move safely from development to production?

Two ways to start

Health Check \$5,000

ABOUT 2 WEEKS · FIXED FEE

- **Capacity use** from your Capacity Metrics data: peaks, throttling and the right SKU size.
- **Workspace inventory**: active, inactive and stale workspaces and items.
- **Governance**: tenant settings, external and public sharing, content ownership and connections.
- **Refresh load** and failures across your models.
- **Version control and deployment**: how changes move from dev to production.
- A scorecard, a findings report with prioritized recommendations, and a 60-minute readout.

Advanced Health Check \$10,000

3-4 WEEKS · FIXED FEE

- **Everything in the Health Check**, plus:
- **Semantic model analysis**: size, storage mode, Direct Lake health and best-practice checks.
- **ETL and pipeline review**: pipelines, dataflows, notebooks and copy jobs — what runs, how often and what it costs.
- **Capacity right-sizing** based on the measured load of each model and pipeline.
- Team interviews, a prioritized roadmap, and readouts for leadership and developers.

How it works

CONNECT

Your administrator approves the Birch Run app with read-only access. We run the collection.

ANALYZE

Findings with evidence, ranked by effort and impact.

READOUT

We review the findings and recommendations with your team. The report is yours.

Read-only, start to finish. Nothing in your tenant changes. We collect configuration and usage metadata only, never report or table data, and email addresses are anonymized before anything is stored. Access is removed when the engagement ends. **Next steps are your choice:** implementation support, team training, or a follow-up check in six months to measure progress. Each is quoted separately.

Nathan Giullian, founder. Designs and optimizes Microsoft Fabric and Power BI environments for reliability, performance and cost.

Start with a 30-minute scoping call at no cost.

We'll discuss your environment and recommend the right tier.
